LIVESTOCK PANELS

OKBRAND offers a comprehensive range of livestock panels. Available in a 4"x4" and 4"x2" spacing configuration paired with a 6 gauge galvanized wire, these panels are designed to meet the diverse needs of livestock management. With a focus on quality and reliability, our panels provide secure enclosures and efficient handling solutions for a wide range of livestock applications.

Our galvanized-before-welded process is used on all OKBRAND welded products. Before welding, wires are galvanized using the tight wipe system, which produces a smooth uniform finish. This eliminates sharp burrs or icicles preventing undue injury to animals or people. Galvanizing before welding combines safety with dependable strength and lasting durability.
